DESCRIPTION

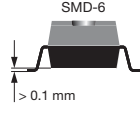

The LH1550 is a single channel solid-state relay in a 6 pin package. It is a SPST normally open switch (1 Form A) that replaces electromechanical relays in many applications. It is constructed using a GaAlAs LED for actuation control and MOSFET switches for the output. In addition, it employs current-limiting circuitry to provide overvoltage protection.

APPLICATIONS

- General telecom switching
- Security equipment
- Instrumentation
- Industrial controls

AGENCY APPROVALS

- UL1577, file no. E52744
