

November 13, 2013

Murata Power Solutions hereby gives official notification that the following product(s) are becoming obsolete with immediate effect. Most of the models in the list have negligible historical activity and some items have zero activity.

It is due to material obsolescence that we are unable to support this product. For this reason we are not able to accept new orders and there will be no opportunity for a last time buy.

For the status of any open orders you may have, please contact our local Sales team.

We do not offer alternative equivalents for the models included in the EOL notice. It is recommended that you speak with our local FAE to determine if another model may be appropriate for your application. Since all applications vary relative to required performance parameters, any suggested substitutes must be tested and qualified in the application.

Should you have any questions or concerns please contact your local Representative, Distributor, or Area Sales Manager.
